

AI Literacy

Understanding artificial intelligence and using it responsibly

PRESENTED BY ABINRAJ CHOVULLAKANDY · IBM SKILLSBUILD

Made with GAMMA

THE CORE IDEA

AI is software that learns patterns to help with human tasks

It can be useful without understanding every situation like a person does.

Recognize

Patterns, language, and information

Generate

Text, images, and other content

Predict

What may happen next

Made with GAMMA

AI IN DAILY LIFE

AI is already woven into everyday life

Smartphones

Voice assistants, predictive text, facial recognition, and photo enhancement.

Education

Explaining concepts, summarizing information, language learning, and practice questions.

Services

Recommendations, predictions, organization, and analysis in streaming, shopping, transport, and healthcare.

Made with GAMMA

FROM INPUT TO OUTPUT

Behind every AI output is a process

A system learns from examples, processes new input, and improves through evaluation.

Collect

Prepare data.

Train

Identify patterns.

Process

Read new input.

Generate

Predict, recommend, classify, or respond.

Improve

Evaluate performance and refine the system.

Example: spam detection learns from examples, analyzes a new message, and predicts whether it may be spam.

Made with GAMMA

TWO KINDS OF LEARNING

Human learning and AI learning are different

Dimension	People	AI models
Learn from	Experience, observation, education, and social interaction	Data, algorithms, and training processes
Bring	Emotions, values, and common sense	Speed and scale for suitable tasks
Can struggle with	Human mistakes	Unfamiliar situations or biased data

Made with GAMMA

A TOOLKIT, NOT ONE TOOL

Different AI technologies solve different problems

Machine learning

Predictions and classifications, such as possible fraud.

Natural language processing

Working with human language, such as translation.

Computer vision

Analyzing images and video, such as visible defects.

Generative AI

Creating text, images, audio, or code.

Recommendation systems

Suggesting relevant items from information and behavior.

Made with GAMMA

PROMPTING AS A SKILL

Better prompts lead to more useful AI assistance

Define

State the goal.

Context

Share what matters.

Requirements

Set audience, format, length, and tone.

Review

Check the output.

Improve

Revise when it misses the mark.

Example: Ask for five affordable restaurant promotions for students in a table, with the benefit of each idea.

Made with GAMMA

AI AND HUMAN JUDGMENT

Use AI to explore a business problem, not make the decision for you

1	2	3	4	5
Define	**Explore**	**Evaluate**	**Choose**	**Measure**
Challenge and relevant information	Summarize feedback and suggest options	Cost, practicality, and fit	Student deals, clearer menus, loyalty programs, or social promotion	Visits, sales, and feedback

AI can widen the options. People remain responsible for the choice.

Made with GAMMA

A RESPONSIBLE DEFAULT

Responsible AI starts with five checks

Accuracy

Verify important information.

Privacy

Protect confidential and sensitive data.

Fairness

Look for biased or unequal outcomes.

Transparency

Communicate when AI is involved.

Accountability

Keep people responsible for important decisions and maintain human oversight.

THE TAKEAWAY

AI literacy means knowing when to use AI and when to question it

- Understand how AI is used and what it can do
- Give clear instructions and useful context
- Review outputs instead of accepting them automatically
- Protect privacy, fairness, transparency, and accountability
- Combine AI's strengths with human judgment

AI literacy is not just knowing how AI works. It is knowing when to use it, how to evaluate its results, and how to use it responsibly.
