

Intermediate HTML Concepts

LEARN A LITTLE MORE ABOUT WHAT YOU CAN DO WITH HTML AND CSS

Abinraj Chovullakandy

Course Overview

Let's learn a little more about what you can do with HTML and CSS

Four major sections:

- Intermediate HTML Concepts
- Intermediate CSS Concepts
- Forms
- Grid

Ends with two projects: Sign-up Form and Admin Dashboard

Intermediate HTML Concepts

Introduction – more of what HTML can do

SVG – scalable vector graphics for crisp, resolution-independent images

Tables – displaying structured, tabular data

Intermediate CSS Concepts (Part 1)

Default Styles – how browsers style elements before you do

CSS Units – px, em, rem, %, vh, vw and when to use each

More Text Styles – fonts, spacing, and typography

More CSS Properties – additional tools for styling

Intermediate CSS Concepts (Part 2)

Advanced Selectors – combinators, pseudo-classes, pseudo-elements

Positioning – static, relative, absolute, fixed, sticky

CSS Functions – calc(), var(), and more

Custom Properties – CSS variables for reusable values

Browser Compatibility – making styles work across browsers

Frameworks and Preprocessors – tools that speed up styling

Forms

Form Basics – inputs, labels, buttons, and structure

Form Validation – ensuring users enter correct data

Project: Sign-up Form – build a real, functional form

Grid: Introduction & Creating a Grid

Introduction to Grid – a two-dimensional layout system

Creating a Grid – display: grid, grid-template-columns, grid-template-rows

Grid vs. Flexbox – Grid is 2D, Flexbox is 1D

Grid: Positioning & Advanced Properties

Positioning Grid Elements – grid-column, grid-row, grid-area

Advanced Grid Properties – gap, grid-template-areas, auto-fit, auto-fill

Using Flexbox and Grid together – the best of both

Project: Admin Dashboard

Build a complete admin dashboard layout

Apply Grid for the overall structure

Use Flexbox for smaller components

Put everything from this course into practice

Key Takeaways

Use SVG and tables for richer HTML content

Master CSS units, selectors, positioning, and custom properties

Build functional, validated forms

Create 2D layouts with CSS Grid – and combine it with Flexbox

Finish with two portfolio-ready projects
